

Evil Edna

We all need an Evil Edna to keep an eye on us. Cut out and make this handy Edna then balance her on your desktop and there will be no more slacking off.

Evil Edna is watching you every move, she knows the websites you visit...

It's a straightforward cut out, fold and glue job. The box itself is the easy part with the legs being a bit tricky. Edna's zapping arial is probably the most awkward. Cut out the arial stand and cut the slot before glueing together. Then feed the tab on the arial through the slot before glueing it into place on Edna's top.

Good luck and behave your self... Evil Edna's watching
