

Merry Christmas from Flare Solutions

The biggest downside at Christmas can be the pine needles. Nothing brings on the holiday blues more than the thought of hoovering up pine needles well into early Spring. That's why Flare Developers have been researching all year to bring you the Flare patented Shedless Christmas Tree.

With sustainable development being at the forefront of our minds, you'll be pleased to know that our Flare Christmas Tree will save trees. Our developers estimate that it will take nearly 7000 of our trees to equal one single traditional 5ft Christmas Tree!

Have a sustainable and needle free Christmas from Flare Solutions.

Carefully cut out the pieces following the solid black lines, including the two little notches on the top of the tree. Starting with the tree, fold along the dotted lines and apply to tab 1a and tuck it under 1b. Fold the base of the tree underneath and glue tab 2a under 2b. To build the trunk fold the dotted lines and glue tab 3a under 3b. Then fold the dark green tabs out and glue them the underneath of the tree. Now fold out the white tabs and glue them to the base. Finally cut out the Flare logo, glue the back and fold together, and finally insert the logo into the notches at the top of the tree
